

Unlock AI Skills & Boost Your Income

A 13-week live webinar series teaching you to harness AI tools and start making money fast. Each interactive session is just £29 and packed with hands-on guidance, expert tips and real-world assignments.

Why Choose Our AI Webinar Series?

In today's rapidly evolving digital landscape, artificial intelligence has transformed from a futuristic concept into an essential toolkit for generating income. Our comprehensive webinar series is designed specifically for professionals and side-hustlers who want to turn AI capabilities into real revenue streams without spending years learning complex technical skills.

What makes our programme truly distinctive is the focus on **immediate practical application**. Whilst many courses teach theory, we concentrate exclusively on techniques that translate directly into earning opportunities. You'll learn to create digital products, build micro-applications, automate business tasks and offer high-value services that clients are actively seeking right now.

Practical & Actionable

Every session focuses on income-generating skills you can implement immediately, from creating digital products to automating business workflows.

13 Cutting-Edge Tools

Master the latest platforms including ChatGPT, Canva, Leonardo AI, Claude, GitHub Copilot and Google Gemini across 13 focused weeks.

Flexible Learning

Attend live sessions or watch replays on your schedule. Weekly exercises and community feedback accelerate your progress.

Affordable Investment

Just £29 per session means you can master cutting-edge tools without breaking the bank. Bundle discounts available for multiple sessions.

Your Learning Journey: Weeks 1–4

01

ChatGPT: Tutoring & Content Creation

Launch freelance tutoring, virtual assistance or writing gigs using conversational AI. Learn to craft effective prompts, build custom GPTs and offer services clients are eager to pay for.

02

Canva: Design & Digital Products

Create and sell planners, worksheets and wall art on platforms like Etsy. Master design principles, build product templates and establish passive income streams.

03

QuillBot: Editing & Summarising

Offer summarisation and editing services whilst learning to repurpose content efficiently. Perfect for content creators and marketing professionals.

04

Copy.ai: Marketing Automation

Build AI-powered marketing campaigns and copywriting services. Learn to create compelling sales copy, social media content and email sequences in minutes.

The first month establishes your foundation in AI-assisted content creation and design. These tools require minimal technical knowledge yet open doors to multiple income streams. Many participants launch their first paid service within the opening four weeks, whilst others use these skills to enhance existing businesses and dramatically reduce the time spent on routine tasks.

Creative & Voice AI: Weeks 5–7

Week 5

Leonardo AI

Generative Art & Licensing

Weeks five through seven introduce you to the exciting world of **creative AI technologies** that are revolutionising digital art, voice production and productivity systems. These tools open entirely new markets for monetisation, whether you're an artist, content creator or business consultant.

Week 6

ElevenLabs

Voice Cloning & Narration

Leonardo AI empowers you to generate stunning artwork without traditional artistic training. You'll learn to create illustrations for print-on-demand products, stock image libraries and custom client commissions. The market for AI-generated art is booming, with businesses constantly seeking fresh visual content for websites, marketing materials and social media.

Week 7

Notion AI

Productivity & Automation

ElevenLabs represents a breakthrough in voice technology. You'll discover how to clone voices ethically, create audiobook narrations and build a passive income stream through the ElevenLabs voice marketplace. Professional voice work that once required expensive studio equipment is now accessible from your home office.

Notion AI transforms personal and professional productivity. Beyond learning the tool itself, you'll understand how to build and sell Notion templates, offer productivity consulting and create automated workflows that save businesses countless hours each month.

Research & Development Tools: Weeks 8–10

The middle portion of our series shifts focus toward **research, analysis and application development** – skills that command premium rates in today's marketplace. These three weeks equip you with capabilities that can transform you from a generalist into a sought-after specialist offering high-value services to businesses and organisations.

1

Perplexity AI: Research & Analysis

Master advanced search and research capabilities to produce comprehensive market reports, competitive analyses and research briefs. Businesses pay substantial fees for well-researched insights, and Perplexity AI dramatically accelerates the research process whilst improving accuracy and depth.

- Conduct market research for startups and small businesses
- Create detailed competitor analysis reports
- Produce niche industry insights and trend forecasts
- Offer research-as-a-service to busy executives

2

Replit: Micro-SaaS & Automation

Learn to develop and deploy small applications using Replit's Agent 3 – no computer science degree required. You'll build practical tools that solve real business problems, from simple calculators to workflow automation systems that save clients time and money.

- Create custom business calculators and tools
- Develop simple web applications for specific use cases
- Build automation scripts for repetitive tasks
- Offer micro-SaaS solutions to small businesses

3

Workday AI: HR & Finance Automation

Specialise in AI-driven consulting for human resources and finance processes. With businesses increasingly adopting Workday, expertise in its AI capabilities positions you to offer valuable consulting services to organisations seeking to optimise their operations.

- Streamline recruitment and onboarding processes
- Automate routine HR administrative tasks
- Implement AI-powered analytics for workforce planning
- Consult on Workday AI integration strategies

Advanced AI Platforms: Weeks 11–13

Week 11: Claude AI

Build chatbots and document-analysis services with Anthropic's ethical AI. Claude excels at nuanced conversations and complex reasoning, making it ideal for customer service automation and content analysis projects.

Week 12: GitHub Copilot

Accelerate development and create prototypes with AI-powered coding assistance. Even if you're not a professional developer, you'll learn to build functional applications and offer coding services to clients.

Week 13: Gemini 2.5

Explore next-generation AI with large context windows and multimodal inputs. Perfect for advanced projects requiring sophisticated reasoning across text, images and other data types simultaneously.

The final three weeks of our programme introduce you to the most sophisticated AI platforms available today. These aren't just incremental improvements – they represent **quantum leaps in capability** that open doors to premium consulting opportunities and advanced service offerings.

Claude AI brings a unique combination of safety, reliability and sophisticated reasoning to your toolkit. You'll learn to build conversational interfaces that handle sensitive information appropriately, making it invaluable for healthcare, legal and financial services applications. Claude's document analysis capabilities enable you to offer services like contract review, research summarisation and content moderation.

GitHub Copilot democratises software development by providing AI-powered coding assistance. You don't need to be a senior developer to benefit – Copilot helps beginners write functional code whilst accelerating experienced programmers. You'll learn to create prototypes rapidly, build simple applications and offer development services that would have been impossible without years of traditional programming training.

Gemini 2.5 represents Google's cutting-edge AI technology, featuring massive context windows that can process entire books and sophisticated multimodal capabilities. This final week prepares you for the future of AI, teaching you to work with tools that can understand and generate across multiple types of media simultaneously. Whether you're creating comprehensive content strategies, building complex analysis systems or developing innovative applications, Gemini 2.5 provides capabilities that will set you apart from competitors.

What's Included in Your Investment

Live Interactive Sessions

Each 60-minute webinar combines expert instruction with hands-on practice. Ask questions in real-time, participate in exercises and receive immediate feedback from both the instructor and fellow participants.

Weekly Assignments

Practical exercises designed to reinforce learning and build your portfolio. Each assignment mirrors real-world projects you could offer to clients, giving you immediate opportunities to start earning.

Comprehensive Resources

Printable workbooks, cheat sheets and resource guides for every tool covered. These materials become your reference library, ensuring you can quickly refresh your knowledge whenever needed.

Lifetime Recording Access

Can't attend live? No problem. Every session is recorded and available indefinitely, allowing you to learn at your own pace and revisit complex topics as many times as necessary.

Private Community

Join our exclusive group of learners where you can share progress, get feedback on your work and discover collaboration opportunities. Many participants find clients and partners through our community.

We've designed this programme to remove every barrier between you and AI mastery. The combination of structured learning, practical assignments and community support creates an environment where success becomes inevitable. You're not just purchasing information – you're investing in a complete learning ecosystem designed to accelerate your journey from beginner to income-generating AI practitioner.

Pricing & Value Proposition

At **just £29 per session**, our webinar series represents extraordinary value in the AI education marketplace. Compare this to traditional courses charging hundreds or thousands of pounds for similar content, and the difference becomes clear. We've deliberately kept prices accessible because we believe financial barriers shouldn't prevent motivated individuals from accessing the skills that will define the next decade of work.

Consider the mathematics: if you implement just one income-generating strategy from a single session – perhaps creating a digital product that generates £50 monthly or landing one freelance project worth £200 – your investment pays for itself many times over. Most participants report earning back their course fees within the first month of applying what they've learned.

Bundle discounts are available when you purchase multiple sessions together, making the per-session cost even more attractive. Whether you choose to attend all thirteen weeks or select specific tools that align with your interests and goals, you're investing in skills that compound in value over time.

£29

Per Session

Affordable access to cutting-edge AI training

13

Tools Covered

Comprehensive toolkit for multiple income streams

60

Minutes Live

Interactive instruction each week

 **Limited spots available for each session!** We deliberately cap enrolment to ensure quality interaction and personalised feedback. Once a session fills, you'll need to wait for the next cohort. Reserve your seat today to guarantee your place in this transformative learning experience.

Success Stories & Outcomes

"Within three weeks of starting the ChatGPT module, I'd launched a tutoring service that now generates £800 monthly. The practical assignments gave me the confidence to start immediately rather than overthinking everything."

— **Sarah M., Virtual Tutor**

"The Canva session unlocked a complete side business for me. I now sell digital planners on Etsy that bring in consistent passive income whilst I continue my day job. Best £29 I've ever spent."

— **James K., Digital Product Creator**

"I was sceptical about AI replacing my design work, but this course showed me how to use it as a powerful tool instead. My productivity has tripled, and I can now take on more clients than ever before."

— **Priya D., Freelance Designer**

Our participants come from diverse backgrounds – teachers looking for summer income, corporate professionals building exit strategies, recent graduates entering the job market and retirees seeking flexible work. What unites them is a willingness to embrace new technology and a commitment to turning learning into action.

The **average participant implements their first income-generating project within four weeks** of starting the programme. Some launch freelance services, others create digital products, and many enhance their existing careers with AI capabilities that make them more valuable to employers. The specific outcomes vary, but the pattern remains consistent: practical AI skills translate directly into income opportunities.

What's particularly exciting is watching participants combine multiple tools from different weeks to create unique service offerings. Someone might use ChatGPT for client communication, Canva for deliverables, and Notion AI for project management – creating a streamlined business system that positions them competitively in the marketplace. This integration of multiple AI tools is where the real magic happens, and it's something we actively encourage throughout the programme.

Ready to Transform Your Income with AI?

The artificial intelligence revolution isn't coming – it's here. The question isn't whether AI will transform how we work and earn income; it's whether you'll be positioned to benefit from that transformation or be left behind by it.

Every week you delay is a week of potential income left on the table. The tools we teach are being used right now by thousands of people to generate substantial income streams. The difference between them and those watching from the sidelines isn't talent or background – it's simply the decision to start learning and applying these skills.
